

# O<sub>2</sub> SL OXYGEN SENSOR

SL Oxygen sensors overcome the problems associated with standard metal can sensors. They are designed to be directly interchangeable with current sensors incorporated into fixed and portable gas detectors.

Typical applications include the measurement of Oxygen deficiency in confined spaces such as tunnels, mines or chemical plant or for the analysis of combustion gases in flues and chimney stacks.

The SL's shock resistant, leak free design ensures lifetime reliability. High sensor to sensor repeatability and high tolerance to temperature and pressure transients also contribute to highly reliable performance. All SL oxygen sensors have lifetimes of 18 months.

Gas	Concentration	Typical O <sub>2</sub> Equivalent
Hydrogen	100%	-9%
Methane	100%	0
Nitrogen Dioxide	25ppm	0

Note: High concentrations of acid gases (eg. CO<sub>2</sub>, SO<sub>2</sub>, NO<sub>2</sub>) will enhance sensitivity to oxygen.

Signal will increase by approximately 0.3% per 1.0% acid gas present.
